

Use this template to make notes while you are researching fungi and deciding which ones to feature on your poster.

NAME	IMAGE	NOTES	USEFUL OR HARMFUL
<b><i>Agaricus bisporus</i></b> Common mushroom		The most common edible mushroom. Chestnut, button, white and portobello mushrooms are all this species at different stages in its life cycle.	
<b><i>Aspergillus flavus</i></b>		Itaconic acid from <i>Aspergillus</i> fungi is used to make Lego™, synthetic rubber and plastic car parts	
<b><i>Armillaria sp.</i></b> Honey fungus		To get nutrients for it to live, honey fungus attacks the roots of woody plants, like trees. However, this can kill the plant.	
<b><i>Candida albicans</i></b>		Found naturally in the human body where it's usually harmless, but too much of it can cause human disease, such as yeast and fungal nail infections.
